

16TH May 2026

10:06 p.m.

I didn't really have a lot of time to work on the project, thus I mainly spent time reading the testing document to understand more about unit testing as well as Poetry and Dependency Management document. I also installed Poetry and have been familiarising myself with it. That was the part that I struggled with the most. I plan on doing unit testing, noting down testing coverage. Also, I'll be taking a look at the extended Euclidean algorithm that is available on Wikipedia and maybe some articles and YouTube videos to better understand it in case Wikipedia isn't enough. After that I'll be testing every function I have in my code using the Euclidean function for modular function.

I spent about five hours this week regarding everything mentioned above that I've done this week.
