

20th June 2026

3:31 p.m.

I rewrote the testing documentation to be more detailed and added details about the unit testing. I explained, in short, what each divided section of the algorithm, e.g. “Sieve of Eratosthenes”, “Miller-Rabin Primality Test”, “RSA Utility Functions” et cetera, are used for ---- as in what the functions in that section are responsible for.

I worked on this week’s stuff for about three to four hours and since most of the things have already been completed from beforehand.

Please read through the testing documentation (it’s in the “Documentation” folder with other documentation files) and let me know if I’m missing anything more. I’ve also moved all weekly reports to the “Summer Reports” folder so my main page is more concise and organised.
